Smart Night Light

Getting to know your Smart Night Light

Suitable for damp locations

For use with Class 2 LPS, 5V, max 2W

Non replaceable light sources
Luminaire should be supplied with SELV
5VDC power source only

Setting up your Smart Night Light

1. Follow instructions in the Alexa app to set up your Echo Flex.
2. With Echo Flex plugged into a wall outlet, insert your Smart Night Light's USB-A connector into Echo Flex's USB-A port.
3. Alexa will automatically discover, connect and name the Smart Night Light to "first light" or similar.
4. Go to the Devices page of the Amazon Alexa app to rename the Smart Night Light, turn it on/off or change its color and brightness.
5. If your Smart Night Light is not discovered within 1 minute, ensure that the Echo Flex is properly configured, unplug and then re-insert Smart Night Light, and say "Alexa, discover my devices".
6. For help and troubleshooting, visit the Alexa app.

Using your Smart Night Light

Once your Smart Night Light is set up, it will default to Auto Mode. Using the built-in light sensor, the light will turn on when it's dark and off when it's light while in Auto Mode.

You can also control your Smart Night Light through voice commands or the Amazon Alexa app. Some things you can try saying are:

"Alexa, rename First Light to my Night Light"
"Alexa, set my Night Light to red"
"Alexa, dim my Night Light to 20%"
"Alexa, turn my Night Light off"

Note that if you turn your Smart Night Light on or off using your voice or the Amazon Alexa app, Auto Mode will be disabled for 12 hours.

This is to prevent the light sensor from turning the light back on right after you've just turned it off. If you want to turn Auto Mode back on without waiting 12 hours, simply unplug the Smart Night Light and plug it back in.

WARNING: THIS NIGHT LIGHT IS NOT SUITABLE FOR HOUSEHOLD ROOM ILLUMINATION. DO NOT EXPOSE TO WATER.
