

# Water Leak Sensor

## Sensor de fugas de agua

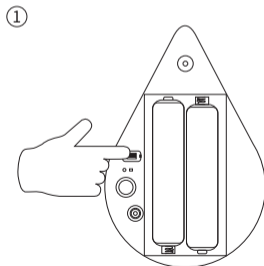

### Mounting Kit

Screw x3

Screwdriver

Battery x2

### Setting up your Water Leak Sensor

1. Follow instructions and get your compatible Zigbee hub setup.
2. To open the back cover of your Water Leak Sensor, use a screwdriver to remove the screws. Then insert two batteries inside the sensor.
3. Configure the Water Leak Sensor with your Zigbee hub. (For help and troubleshooting related to configure device with Zigbee hub, visit the hub's user manual)
4. To factory reset the sensor, long press the inside button of the sensor to place it in pairing mode (Figure ①). Release the hold until you see the red LED turn on. After you release the hold, LED will change to a fast blinking blue light indicating the sensor is now ready for set up.
5. Put the sensor's back cover back and replace the screws.

### Using your Water Leak Sensor

1. Place the sensor on the floor of your kitchen, basement, laundry room, or any other flat surface where you would like to monitor for leaks. Consider placing your sensors near the washing machine, water heater, sinks, or dishwasher.
2. The alarm will go off any time water is detected. You will also receive a alert on your phone.
